- by fluoride content and States for:--
 A. Communities with single water sources
- A. Communities with single water sources

 B. Communities with multiple water source
- B. Communities with multiple water sources
 C. Communities reporting maximum and minimum

fluoride content of water sources

A census of community water sources which continued by the Dental Directors of all State healt

6 and early 1957 at the request of the United St

ulutions and listings, are presented in this rep e material for use by individuals and agencies i ormation about drinking water sources in each of

specific communities.

All communities enumerated have at least one was

more fluoride concentration -- the minimum level w

included because one of its water sources met t rees of that place were shown, including those w

s than 0.7 ppm. As a result, there are 125 commvey for which the average fluoride content of alless than 0.7 ppm.

In compiling the data, communities were groupe er sources used. It was assumed that a communitate if only one fluoride concentration was reportions were reported, it was assumed that each fluoride concentration.

resented a separate water source. For the State ico and Texas, as well as for a few scattered coates, the maximum and minimum fluoride levels of

ported for each community, without specifying the

ese communities were grouped separately cer sources reported.

At the beginning of 1957, there were 1,903 of States with at least a single source of drinking

ride concentration of 0.7 ppm or more. More than

communities are located in 6 States -- Illinois, In Dekota and Texas (Table I and Figures I and 2).

The States of Maine, Vermont, Massachusetts, reported no known communal water sources with nat

Over 6,952,000 persons reside in communities ride-bearing water sources with minimum concentre

number, about 40 percent dwell in Texas. In New total State population (the largest proportion of supplied by at least one communal water source with

Of the 1,903 communities enumerated, 1,119 1

ride level of at least 0.7 ppm.

fluoride concentrations were reported, without sumber of water sources utilized.

ent in 895 communities with about 4,256,000 resitotal population provided with natural fluoride-(Table II and Figure 3). This range approximate levels for optimal dental caries control in the

Natural fluoride water concentrations avera

fluoride levels of 1.2 - 1.4 ppm are found in the munities with 598,000 persons (9 percent of total scale there are 620 communities with about 1,400

total) with fluoride concentrations in their dri

The remaining 125 communities, with about 698,0 of total) have average fluoride levels of less that the with average fluoride levels of less than 0.7 pp. They have multiple water sources of which at 1 m concentration of 0.7 ppm or greater, or, 2. The man and minimum fluoride levels and the maximum of the creater.

re 270 communities with about 1,539,000 people so concentrations of 0.7 ppm (Table III) -- the largest and persons when the data are arrayed by spectator sources. The second largest group of communargest number of individuals is found at the 0.8 average fluoride levels of the water supplies in range from below 0.7 ppm to as high as 7.7 ppm. are 15 cities with populations of over 50,000 the one 7 million people consuming water from sources stent of 0.7 ppm or above. Cities in the 5,000 to

138 percent of this population; those ranging in

rsons served 20 percent; and those under 1,000 pe

: IV and Figure h).

Communities

sic data have been arranged into 2 listings. In

th drinking water sources which contain minimum r

ons of 0.7 ppm are arranged alphabetically, by St

copulation size and the natural fluoride concentr

e is given. However, if the same fluoride concer

more than one water source in a community, that o

VII

listed only once. Places for which maximum and trations were reported are identified by asteris

fluoride levels are given. (If only one fluorid of these communities, in Louisiana it refers to tration, in New Mexico to average, and in Texas

In Listing #2, communities provided natural are presented in three sections: (A) single water water sources, and (C) maximum and minimum fluor

tion.)

Within each section of this list, communities as the following ranges of fluoride concentration:

0.7 - i.1 ppm; 1.2 - 1.4 ppm; 1.5 - 2.9 ppm; 3.or more. Communities with single water sources once; communities with multiple water sources (

or more fluoride content ranges as determined b level of each water source, but appear only onc

Communities with maximum and minimum fluoride c (Part C) are listed only once, and are shown in

the average of the two fluoride levels reported Populations shown for each community were

Census sources, unless more current population the State Health agencies.
